

A complete software for electrical engineers and professionals, designed to meet our customer expectations. We offer you a wide selection of software to choose from depending on your requirements.

You can select and modify the supplier references whenever you want to. Either as soon as you introduce the symbol or at any other time during the course of the work. You click the symbol and select the reference in a window WITHOUT EXITING THE DIAGRAM.

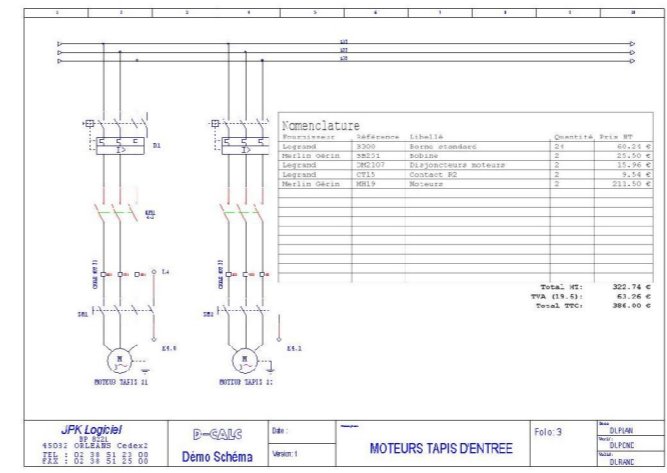

You can **number this bill of materials**, create backup pages, logos and title blocks of all types in the libraries without any restriction in number or size. Terminal blocks, bill of materials and cabinet drawings can be inserted in any place on your diagram.

D-CALC Prem'Elec

Electrical schematics software for creating your diagrams.
The basic functions enable you to work with your drawings in all sizes and scales

- Libraries of standardized symbols, delivered in standard version (electricity, pneumatic, grafcet, hydraulic, video, electronic, mechanical, computer...).
- Editing and creating symbols.
- Managing and personalizing your Title block.
- Retrieving bitmap images in BMP, JPG and GIF format.
- Editing your pages on printer and on tracer.
- Drafting your layouts

Automatic cross-referencing

D-CALC generates on demand on all the pages, the tag marking of relays (coils, contacts). The contact terminals are numbered if you require it.

All referencing errors are reported (e.g.: maximum number of contacts exceeded on a relay or contacts without coils).

Terminal blocks / Cables

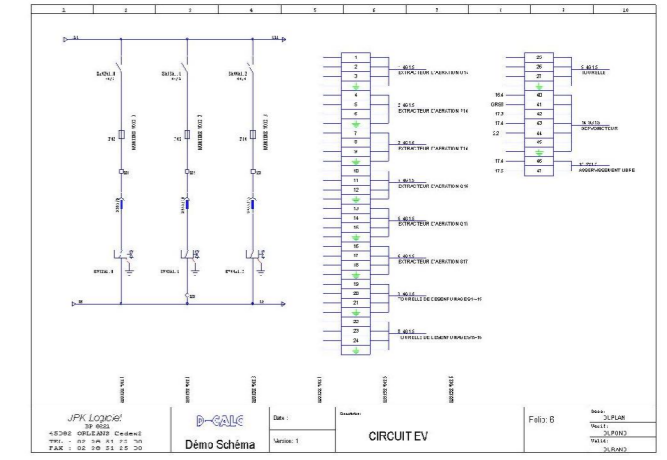

You define the allocation of your terminals on the cables that you chose by selecting them DIRECTLY on the diagram.

Power and remote control can be handled in the same diagram.

Once the cables are defined, D-CALC takes care of detailing the terminal block design.

You can then present it and annotate it as you desire.

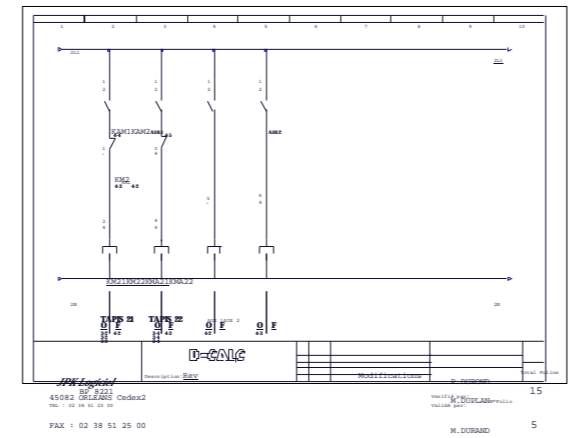

If at this time you have not numbered your terminals, D-CALC will do it automatically

D-CALC Schema - Basic

All the functions of D-CALC Prem'Elec with DXF compatibility in addition.

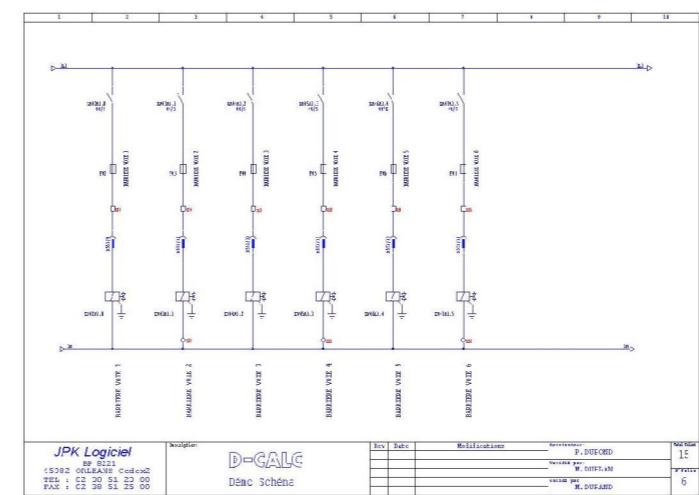

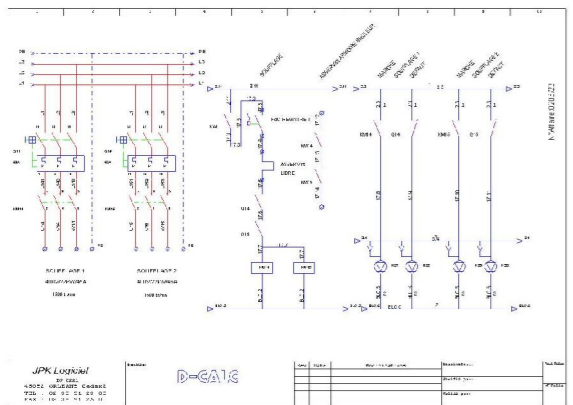

- Option to add **automatic modules**

D-CALC Pack Diagram

The features of D-CALC Schema - Basic version and in addition, the automatic modules giving you all the power necessary to create rapidly your wiring diagrams.

- Cross references,
- Terminal blocks,
- Simple or numbered bill of materials.

Automatic numbering of wires and terminals

The numbers of the wires and terminals are obtained, modified or completed at any time during the course of developing the diagram, and immediately inserted on the layout. The connection points are generated automatically on demand.

Several numbering options are provided to you:

- From manual numbering which enables picking up from the existing installation to the Completely automatic numbering.
- D-CALC provides numerous alpha-numeric tag marking options
